Reactive Light Display in Stamford Downtown

Wednesday, May 17, 2017 at 6:30pm

WHAT:

Have you ever noticed the magnificent 50' Oak Tree that graces the entrance to the Ferguson Library in Stamford Downtown? This spring the tree will come to life! Stamford Downtown (DSSD) has installed a state-of-the-art RGB LED reactive lighting system which will cause the tree to react to sounds from the sidewalk with a display of "dancing" multi colored lights. The more sound the hidden microphones detect, the more intense the display.

500 RGB reactive lights have been installed on the branches of the tree: all controlled by a custom-designed audio system. Using hidden microphones, the special software processes the incoming audio signals and translates them into colorful patterns. Data is sent to the lighting controller that changes the colors and sequences to match the audio giving pedestrians a colorful moving light display which they control.

This outdoor display is open to the public 24/7 and will run all year.

Clap, Sing, Play your guitar under the Ferguson Library tree:
A tree of many colors! Come and see for yourself.

WHEN: Wednesday, May 17, 2017
Beginning at 6:30 pm (dusk)

WHERE: Ferguson Library at the corner of Broad and Bedford Streets.
